IXP is an organic evolution of XP

Six new practices

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Readiness assessment</b><br>Prior to starting an IXP project, the organization should conduct a <i>readiness assessment</i><br><br>Ascertaining whether:<br><ol style="list-style-type: none"><li>1. An appropriate environment exists to support IXP</li><li>2. The team will be populated by the proper set of stakeholders</li><li>3. The organization has a distinct quality program -- supporting continuous improvement</li><li>4. The organizational culture will support the new values of an agile team</li><li>5. The broader project community will be populated appropriately</li></ol> | <b>Project community</b><br>XP suggests that the right people be used to populate the agile team<br><br>When XP is applied for a significant project -- the expectation is that the team should morph into a community<br><br>With technologists and customers who are central to the success of a project, as well as many stakeholders<br><br>In IXP, the community and their roles should be explicitly defined -- with mechanisms for communication and coordination established. |
| <b>Project chartering</b><br>The IXP team assesses the project itself to determine whether a business justification for it exists and whether it will further the overall goals and objectives of the organization                                                                                                                                                                                                                                                                                                                                                                                     | <b>Test-driven management</b><br>IXP projects require measurable criteria for assessing the state of the project and the progress made to date<br>Test-driven management establishes a series of measurable destinations -- defining mechanisms for determining whether these destinations have been reached                                                                                                                                                                          |
| <b>Retrospectives</b><br>IXP teams conduct a specialized technical review after software is delivered<br>Examining issues, events, and lessons learned to improve the IXP process                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>Continuous learning</b><br>Learning is a vital part of process improvement<br>Members are encouraged to learn new methods and techniques that can lead to a better product                                                                                                                                                                                                                                                                                                         |

IXP modifies Story Driven Development, insisting that stories for acceptance tests be written before a single line of code is made

Domain-driven design suggestion the creation of a domain model that accurately represents how domain experts think about their subject

Pairing extends pair-programming to include managers and other stakeholders

Improving knowledge among XP members who may not be involved in technical development

Iterative usability discourages front-loaded interfaces in favour of usability design that evolves as software increments are delivered and users' interaction with the software is studied
