

Manage your PPP

Sunday, December 17, 2023 1:47 PM

People	Product	Process						
Cultivating motivated and highly skilled software people <i>People Capability Model</i> This includes stakeholders, team leaders, and the software team Ensure you have strong communication and interoperability	Ensure you have clear context of what you're building (project scope) Decompose your problem into parts and solve the parts separately -- Divide and conquer	Meld the product and process together Remember the framework activities <table><tr><td>Communication</td><td>Planning</td></tr><tr><td>Modelling</td><td>Construction</td></tr><tr><td>Deployment</td><td>Blank space</td></tr></table> Choose the best process model for the job -- then plan how you will complete each framework activity Task sets adopt framework activities	Communication	Planning	Modelling	Construction	Deployment	Blank space
Communication	Planning							
Modelling	Construction

Dealing with communication issues

Formal communication

- Writing
- Structured meetings
- Low interactivity

Informal

- Personal
- Sharing ideas ad-hoc
- Ask for help with problems
- Daily interaction

Types of stakeholders:

- Senior managers
 - Defined business issues/details
- Project managers
 - Technical managers
 - Plan, Motivate, Organize, Control (PMOC) the devs
 - PM's PMOC the devs
- Practitioners
 - Devs
- Customers
 - Specify the requirements
 - Have an interest in the outcome
- End users
 - Use the production software

Organizations structure -- CRO

- Closed
 - o Structures the team along a hierarchy of authority
 - o Likely to repeat history, not innovative
- Random
 - o Loosely structured team
 - o Depends on individual initiative
 - o Great when innovation is needed
 - o Not good for orderly performance
- Open
 - o Mix of above
 - o Collaborative work
 - o Consensus-based decision making
 - o Heavy collaboration

Umbrella activities are covering everything, all the time

Different from framework activities

Estimating project scope

Context

- How does the software fit into the business or another system?
- What constraints?

Information

- What objects are visible as output?
- What's required for input?

Function

- What does the software do to input?
- Are there any performance characteristics?
